### Türkiye's Annualized Exports in April Hit Highest Level in History, Trade Minister Says

**12-month annualized exports reach \$265B, while monthly exports rise to \$20.9B, second-highest April figure**

Annualized goods exports of Türkiye hit an all-time high of \$265 billion in April, Türkiye's Trade Minister Prof Dr Omer Bolat said. The 12-month annualized exports climbed by 2.7%, corresponding to a year-on-year increase of \$7.1 billion.

The trade deficit over the last 12 months was \$86.6 billion, down by 6.8% or \$6.4 billion compared to the previous period.

Meanwhile, April's exports rose 8.5% year-on-year to \$20.9 billion, the second-highest April export figure in history.

### Tariffs Tensions Spur Global Recession Concerns

**Int'l organizations downwardly revise or reduce growth estimates, expecting sharp declines this year and next, while projecting global growth levels below 2.5% recession threshold**

The UN Conference on Trade and Development (UNCTAD) projects that global growth will slow to 2.3% this year, below the 2.5% threshold usually seen in a global recession. The projection marks a sharp slowdown compared to the annual economic growth rates in the pre-pandemic period. The UNCTAD Economic Policy Uncertainty Index reached 460.2 in January, the highest of the century.

The World Trade Organization (WTO) downwardly revised its global growth forecast by 0.6% to 2.2%, citing tariffs and rising policy uncertainties. The WTO estimates that the global trade in goods will contract by 0.2% this year due to high tariffs, while the harshest situation is expected to be seen in North America with significantly fewer exports. In the event of tariffs' resumption, the contraction in global trade could reach as high as 1.5% this year. The WTO estimates that the global economy will grow 2.4% in 2026.

The IMF said tariff poses great risks to the global economy, predicting a decline of about 2% to the US gross domestic product (GDP) and 1% to the global GDP.

The OECD's Economic Outlook report lowered its global growth forecast to 3.1% in 2025 and 3% in 2026.

For the source of news, please visit [AA](#) website.

### Temporary Tariff Pause Mitigates Trade Contraction, But Strong Downside Risks Persist

Under current conditions, the volume of world merchandise trade is likely to fall by 0.2% in 2025. The decline is expected to be particularly steep in North America, where exports are forecasted to drop by 12.6%.

However, severe downside risks exist, including the application of “reciprocal” tariffs and broader spillover of policy uncertainty, which could lead to an even sharper decline of 1.5% in global goods trade and hurt export-oriented least-developed countries.

The volume of services trade is forecasted to grow by 4.0% in 2025, around 1 percentage point less than expected.

For the source of news, please visit [WTO](https://www.wto.org/) website.

### Trade Tensions and Rising Uncertainty Drag Global Economy Towards Recession

**UNCTAD expects global growth to slow to 2.3% this year as trade and economic policy uncertainty erode business and investor confidence**

Global growth is forecast to slow to 2.3% in 2025, slipping below the 2.5% threshold often associated with a global recession, UN Trade and Development (UNCTAD) said in its latest report. This marks a sharp deceleration compared to already sluggish pre-pandemic growth rates.

UNCTAD warns that rising uncertainty is weighing heavily on the global economy. Trade tensions are escalating, with recent tariff hikes undermining predictability. Rising fragmentation, if left unchecked, could deepen the downturn.

**Trade and financial turbulence intensify amid policy uncertainty**

Trade policy uncertainty, now at historic highs, is eroding business confidence and reshaping global trade patterns. Manufacturers and investors are delaying decisions, reassessing supply chain strategies and stepping up risk management efforts. After a temporary surge at the end of 2024, merchandise trade momentum is fading, with the Shanghai Containerized Freight Index dropping by 40% between January and March 2025, falling back to pre-pandemic levels.

Record-high economic policy uncertainty is also fuelling financial turbulence. In early 2025, the Economic Policy Uncertainty Index reached its highest level this century, surpassing peaks during the 2008 financial crisis and the COVID-19 pandemic.

For the source of news, please visit [UNCTAD](https://unctad.org) website.

**IMF: A Critical Juncture Amid Policy Shifts**

**Global Growth is Expected to Decline and Downside Risks to Intensify as Major Policy Shifts Unfold**

After enduring a prolonged and unprecedented series of shocks, the global economy appeared to have stabilized, with steady yet underwhelming growth rates. However, the landscape has changed as governments around the world reorder policy priorities and uncertainties have climbed to new highs.

Forecasts for global growth have been revised markedly down compared with the January 2025 World Economic Outlook (WEO) Update, reflecting effective tariff rates at levels not seen in a century and a highly unpredictable environment. Global headline inflation is expected to decline at a slightly slower pace than what was expected in January.

Intensifying downside risks dominate the outlook, amid escalating trade tensions and financial market adjustments. Divergent and swiftly changing policy positions or deteriorating sentiment could lead to

even tighter global financial conditions. Ratcheting up a trade war and heightened trade policy uncertainty may further hinder both short-term and long-term growth prospects. Scaling back international cooperation could jeopardize progress toward a more resilient global economy.

At this critical juncture, countries should work constructively to promote a stable and predictable trade environment and to facilitate international cooperation, while addressing policy gaps and structural imbalances at home. This will help secure both internal and external economic stability.

The IMF in January forecast global growth of 3.3% in 2025 and 3.3% in 2026. According to the IMF's projections, global growth is expected to increase by 2.8 percent this year, which is 0.5 percentage points lower than the previous World Economic Outlook (WEO) forecast in January. For next year, global growth is projected to reach 3.0 percent, down 0.3 percentage points from the January forecast.

The IMF forecasts Türkiye's inflation rate to decline to 35.9 percent by the end of 2025 and further ease to 22.8 percent in 2026. It also projects the current account deficit to remain at 1.2 percent of GDP in both 2025 and 2026.

## Türkiye-EU High-Level Economic Dialogue Returns After 6 Years

### Türkiye-EU economic ties, setting stage for greater collaboration, shared prosperity

Türkiye-EU High-Level Economic Dialogue convened in Brussels, marking a significant step in strengthening economic ties and strategic cooperation between the two sides. The dialogue was first established at a Türkiye-EU summit in 2015 to foster dialogue on economic matters.

The meeting aims to accelerate economic collaboration and expand areas of mutual interest.

The event divided into two main sessions. The first featured ministerial-level discussions on the macroeconomic outlook, competitiveness, and structural reforms. The second session brought together top executives from leading Turkish and EU businesses, as well as financial institutions such as the European Investment Bank and the European Bank for Reconstruction and Development, to explore investment and trade opportunities.

## Türkiye Becomes Strategic Partner in Three Seas Initiative

**Türkiye's application for strategic partnership approved during 10th summit of Three Seas Initiative held in Warsaw**

Türkiye has become the strategic partner of the Three Seas Initiative (3SI). The Three Seas Initiative brings together the presidents of countries located between the Adriatic, Baltic, and Black Seas to promote cooperation. The aim is to strengthen the European Union's cohesion by improving infrastructure, energy, and economic cooperation among Central European countries. Member states approved Türkiye's application for strategic partnership at the 10th summit, which was held in Warsaw.

As part of the initiative, Türkiye highlights its priorities in economic growth, new infrastructure investments, and energy security. In this context, the platform's main agenda items will include Ukraine's reconstruction and infrastructure improvements.

## Türkiye, Italy Sign 11 Memorandums of Understanding, Including on Trade, Industrial Investments

**Following Türkiye-Italy Intergovernmental Summit, two nations strengthen ties through pacts on trade, space, culture, defense, and several other areas**

Türkiye and Italy signed a series of pacts covering such diverse areas as trade, industrial investments, space, culture, sports, social services, archives, transportation, and defense. The memorandums of understanding followed the Fourth Türkiye-Italy Intergovernmental Summit, co-chaired by Turkish President Recep Tayyip Erdoğan and Italian Prime Minister Giorgia Meloni.

Key agreements included a Joint Ministerial Statement between the Turkish Trade Ministry and Italy's Foreign Ministry to strengthen trade ties. Another memorandum of understanding was signed between the Turkish Industry and Technology Ministry and Italy's Ministry of Enterprises and Made in Italy to enhance cooperation in science, technology, innovation, industry, and investment. Other notable memorandums of understanding include those between the Turkish Space Agency and the Italian Space Agency for peaceful space activities, as well as one between the Turkish Culture and Tourism Ministry and Italy's Culture Ministry to combat the illicit trade of cultural property.

Additional agreements covered inter-museum cooperation, the promotion of archaeological heritage, and cooperation between the Turkish State Archives and the Italian Culture Ministry's Archives Directorate. Another memorandum of understanding was also signed between the Turkish Youth and Sports Ministry and Italy's Sports and Youth Ministry, along with a cooperation agreement between Türkiye's Family and Social Services Ministry and Italy's Disabilities Ministry. The Turkish Transport and Infrastructure Ministry and the Italian Infrastructure and Transport Ministry also signed a memorandum of understanding to further strengthen transportation cooperation.

## Türkiye's Trade Minister Visits Japan to Boost Cooperation

**2-day official visit aimed to carry deep-rooted friendship between Türkiye and Japan to higher level in economic and commercial fields**

Turkish Trade Minister Omer Bolat paid a two-day visit to Japan with officials from both the government and private sectors to strengthen economic and trade cooperation. Within the scope of the visit, which coincides with the 101st anniversary of diplomatic relations between the two countries, Bolat attended the official opening ceremony of the Turkish pavilion for EXPO 2025 Osaka and introduced Türkiye's cultural and technological vision to the international community.

Türkiye is participating in EXPO 2025 Osaka with the theme, "Golden Age of Civilizations," while the 900 square meter national pavilion brings together Anatolia's cultural heritage and the country's vision for the future. On the second day of the visit, Bolat held separate bilateral meetings with the Japanese ministers of trade, transport and infrastructure, and agriculture in Tokyo. Bolat also attended the Türkiye-Japan CEO round table meeting, which brings together the leading names of the Turkish and Japanese business world, and meet the president of Japan External Trade Organization (JETRO).

### Call for strategic investments

While the trade volume between the two countries reached \$5.4 billion in 2024, Japan is Türkiye's fourth largest trading partner in Asia. Türkiye's exports amounted to \$718 million and imports \$4.7 billion, which points to a structural imbalance between the parties.

Accelerating the negotiations on the Economic Partnership Agreement (EPA), launched in 2014 to address this imbalance and build a more equitable economic structure, is a priority on the common agenda. The total investment of more than 275 Japanese companies operating in Türkiye exceeds \$3.1 billion.

Türkiye offers significant opportunities for Japanese capital with its strategic intercontinental location, young and dynamic labor force, advanced infrastructure and investor-friendly reforms.

## Türkiye's Trade Minister to Pay 2-Day Official Visit to Syria

**Omer Bolat to hold bilateral and delegation meetings with his counterparts on various issues, including trade, customs, transportation, investment, finance and banking, contracting, and energy**

Turkish Trade Minister Prof. Dr. Omer Bolat visited the Syrian capital of Damascus with the heads of business umbrella organizations to discuss trade, customs, transportation, investment, and energy issues between the two countries. Businesspeople, chamber, and union leaders joined Bolat's delegation for the two-day visit.

During the visit, it was discussed issues such as strengthening cooperation in Syria's economic development under the new process, improving communication and relations between the two countries' economic actors, and increasing institutional coordination in preparations for the construction of a free Syria. Bolat held bilateral and delegation meetings with his counterparts on various issues, including trade, customs, transportation, investment, finance and banking, contracting, and energy. The minister met with Syrian ministers of economy and industry, finance, transportation, and General Administration of Land and Sea Ports director during his visit.

## SECTORS

### World Bank Expects Global Commodity Prices to Fall to 6-Year Low in 2026

**Commodity prices expected to fall by around 12% this year and by another 5% in 2026**

The World Bank said that global commodity prices are expected to fall to six-year low figures next year on weakening economic growth combined with abundant oil supplies. "Commodity prices are set to fall sharply this year, by about 12% overall, as weakening global economic growth weighs on demand," it said in its Commodity Markets Outlook report.

In 2026, commodity prices are projected to decline by another 5%, reaching a six-year low. The decline could alleviate short-term inflation risks arising from increasing trade barriers but at the same time weaken the economic progress prospects of two out of every three emerging economies, the report said.

In nominal terms, prices will still be higher than before the start of the COVID-19 pandemic, the report said, but inflation-adjusted prices could fall below the average level between 2015 and 2019 for the first time. The report pointed out that global commodity prices have been declining since 2023, helping to suppress inflation around the world.

Energy prices are expected to decline by 17.4% this year to a five-year low and by 5.9% in 2026. The price of Brent crude oil is expected to fall to an average of \$64 per barrel this year and \$60 in 2026. The report said that global oil supply is expected to exceed demand by 700,000 barrels per day this year, while noting that the rapid spread of electric vehicles also limits oil demand. Food prices are expected to fall by 7% in 2025 and 0.9% in 2026.

The average price of gold, a popular choice for investors seeking a “safe haven,” is expected to reach a new record this year before stabilizing in 2026, the report said. Noting that the price of gold, which has a special position among assets, often rises during periods of geopolitical and political uncertainty, including conflicts, the report said that over the next two years, gold prices are expected to hover about 150% higher than the average of the five years before the COVID-19 outbreak.

### FAO Food Price Index Rises in April on Higher Cereal, Dairy and Meat Prices

The FAO Food Price Index\* (FFPI) averaged 128.3 points in April 2025, up 1.2 points (1.0 percent) from March. Increases in the cereal, dairy and meat price indices outweighed decreases in those of sugar and vegetable oils. Overall, the FFPI was 9.0 points (7.6 percent) higher than its level a year ago but remained 31.9 points (19.9 percent) below its peak reached in March 2022.

The FAO Cereal Price Index averaged 111.0 points in April, up 1.3 points (1.2 percent) from March but still 0.6 points (0.5 percent) below its year-earlier level. The monthly increase reflected higher prices across all major cereals. Global wheat prices rose marginally, supported by tightening exportable supplies in the Russian Federation, steady export pace from some major exporters, and currency movements linked to a weaker United States dollar, particularly against the euro. However, trade policy developments and macroeconomic uncertainty limited the rise. International maize prices also increased, largely due to seasonally tighter stock levels in the United States of America and currency movements. Adjustments to the United States’ import tariff policies – including the exemption of Mexico, the leading importer of US maize, and a 90-day pause on import tariffs above 10 percent for several other trading partners – further contributed to the upward price pressure. Among other coarse

grains, world prices of sorghum and barley also increased. Meanwhile, the FAO All Rice Price Index increased by 0.8 percent in April, as demand for fragrant varieties strengthened and the arrival of freshly harvested supplies diminished in Viet Nam, as the country's main crop harvest entered its final stage.

**The FAO Vegetable Oil Price Index** averaged 158.0 points in April, down 3.7 points (2.3 percent) from March but remaining 20.7 percent above its level a year ago. The decline was mainly driven by lower palm oil prices, which more than offset higher soy and rapeseed oil quotations, while global sunflower oil prices remained largely stable. After two months of increases, international palm oil prices fell markedly in April, largely underpinned by a gradual recovery in global export supplies due to seasonally higher outputs in major Southeast Asian producing countries. By contrast, world soy and rapeseed oil prices continued to rise, broadly reflecting, respectively, persistently firm global import demand and tightening supplies as the 2024/25 season nears its end. International sunflower oil prices, meanwhile, fluctuated within a narrow range during April but remained well above their year-earlier levels, amid shrinking supplies out of the Black Sea region.

**The FAO Meat Price Index** averaged 121.6 points in April, up 3.7 points (3.2 percent) from March and 5.0 points (4.3 percent) higher than its value a year earlier. International meat quotations rose across all categories, with pig meat prices registering the most significant increase. The rise was underpinned by higher quotations in the European Union due to stronger global import demand, following the reinstatement of Germany's foot-and-mouth disease-free status and the lifting of related restrictions by importers, further bolstered by increased seasonal demand associated with Easter holidays. Bovine meat prices also firmed, particularly in Australia and Brazil, amid steady import demand and limited global availabilities. Ovine meat prices surged as well, reflecting strong buying interest from key markets. Meanwhile, poultry meat prices rose moderately, especially in Brazil, where robust external demand and festivity-related processing slowdowns tightened exportable supplies and added upward pressure on prices.

**The FAO Dairy Price Index** stood at 152.1 points in April, averaging 3.5 points (2.4 percent) up from March and as much as 28.4 points (22.9 percent) higher than a year ago. International butter prices rose for the third consecutive month to a new all-time high, with a 2.9 percent increase from March. The surge was largely driven by higher European prices supported by reduced inventories and strong milkfat demand, despite seasonally higher milk production. International prices of milk powders (SMP and WMP) also rose, by 1.6 and 2.9 percent respectively, underpinned by steady domestic demand and a shift in export interest from Europe – where a stronger euro reduced competitiveness – towards Oceania, where seasonally declining milk production tightened spot availability. Meanwhile, international prices of cheese increased by 2.3 percent from March, driven by strong export demand amid tightening supplies in Oceania.

**The FAO Sugar Price Index** averaged 112.8 points in April, down 4.1 points (3.5 percent) from March, marking the second consecutive monthly decline, and standing 13.8 points (10.9 percent) below its level in April 2024. The drop in world sugar prices was largely driven by concerns over the uncertain global economic outlook and its potential impact on demand from the beverage and food processing sectors, which account for the bulk of global sugar consumption. Larger-than-expected sugar output in Brazil in the second half of March added further downward pressure. Furthermore, the depreciation of the Brazilian real against the United States dollar and lower international crude oil prices contributed to the decline in world sugar prices.

## Türkiye Sees New Heights in Defense and Aviation Exports in April

**Defense and aviation exports reach \$2.24B in first 4 months of 2025, jumping 67% year-on-year**

Türkiye's defense and aviation exports saw new peaks in April, the head of the Turkish Defense Industries Secretariat announced. "In April 2025, our defense and aerospace industry exported \$539 million worth of goods, up 54%," he said. Exports jumped 67% this January-April to \$2.24 billion, while the total for the last 12 months rose 42% to \$7.64 billion.

"These figures are not just a momentary success; they are an indication of a rise that is sustained with determination and supported by strategic steps. The Defense Industries Secretariat is working with all our might to ensure the sustainability of exports with high technology-based, high value-added products," he added. Türkiye's defense and aviation sectors continue to post historical growth and successes as their products spread across the globe.

## Türkiye's Tourism Income Up 5.6% \$9.45b in Q1

**Average expenditures per capita among visitors was \$1,022 in Q1, up 4.8% year-on-year**

Türkiye generated tourism revenues of \$9.45 billion during the first quarter of 2025, up 5.6% on a yearly basis, the Turkish Statistical Institute (TurkStat) announced. In the first quarter, the share of food and beverage expenditures in total tourism income was 24.7%, while the share of international transportation expenditures was 15.9% and package tour expenditures 13.1%.

People visited Türkiye mostly for reasons of travel, entertainment, sports, and cultural activities, with 52.5%. The number two purpose of visits was visiting relatives and friends with 26.7%, followed by shopping with 10.3%.
